#### PRELIMINARY NDNP CANDIDATE TITLES

The conditions of the grant state that the titles selected for scanning must meet the LC definition of a newspaper:

"A newspaper is a serial publication, appearing usually at least weekly, which serves as a primary source of information on current events of general interest."

The titles must be in English and, for this grant cycle, fall between 1880 and 1922. The titles should be significant to the state or region because of their political, economic, and cultural content. "These include, but are not limited to, titles of statewide or regional influence and titles important as a source of information about a variety of ethnic, racial, political, economic, religious or other special audiences or interest groups.

"Preference is given to the "paper of record" at the state or county level, contain legal notices, news of state and regional governmental affairs, and announcements of community news and events, including births, deaths, and marriages."

Titles selected should offer broad geographic coverage of the state, and, ideally, were published over a long period of time.

Newspapers should be available on high quality microfilm. Reduction ratio is another factor to be considered; below 20X is preferred.

The selection committee is attempting to make the list representative of a truly statewide project, by identifying titles representative of as many counties as is reasonably possible (20 of 39 counties) and/or artificially constructed "regions" of the state (10). See "County Coverage" and "Geographic Regions" at the end of this document.

For more information on selection criteria, see the NDNP website, pages on Content Selection:
